

Autonomous Haul Trucks

Business Challenge:

- Client is a leading international mining company with operations worldwide.
- The mining industry is traditionally labor-intensive and involves significant operational costs.
- Safety is a major concern due to the hazardous nature of the work.
- The efficiency of haul trucks impacts the overall productivity of mining operations.
- Mining company aims to decrease the emissions from various equipment to protect the environment.

Solution:

- The introduction of autonomous haul trucks in mining operations for one of the north American site.
- These trucks use advanced technologies like GPS, Lidar, and AI algorithms for navigation & operation.
- The transition involved rigorous testing, staff training, and integration with existing systems.
- Hexaware assessed Dispatch and the Fleet system at the mining site.
- Hexaware team provided Solution Architecture, Design & perform the data engineering work that is necessary for performing the data migration & data integration related work for CAT Minestar Fleet and Command systems with Snowflake.
- Our team also developed BI Reports and Dashboards pointing to the new data warehouse consumption structure
- This will provide the client with Increase efficiency, reduced operational cost, improved safety and decreased emissions

15-20%	90%	5-7%	7%	17%	30%
Production Increase	Expected Availability	Reduction in Fuel Consumption	Tire Wear Reduction	Maintenance Savings	Operating Cost Saving
