Episode 5 : Advanced Analytics for Copper Production Optimization

Strategic
Initiatives

Maximize copper recovery and production efficiency through advanced analytics, machine learning, and real-time process optimization, enabling higher output from existing mining assets while reducing operational costs.

CTO Focus

Increase copper recovery rates through data-driven process optimization

Leverage AI and machine learning to identify production bottlenecks

Enable real-time operational visibility across concentrators and processing plants

Improve decision-making through predictive and prescriptive analytics

Investment Areas

Advanced Analytics Platforms

Machine Learning & AI Models
